Gerald Champion Regional Medical Center

Alamogordo, NM

Community Health Needs Assessment and Implementation Strategy

Adopted by Board Resolution October 12, 2018

1Response to Schedule H (Form 990) Part V B 4 & Schedule H (Form 990) Part V B 9
Dear Community Member:

At Gerald Champion Regional Medical Center, we have spent more than 62 years providing high-quality compassionate healthcare to the greater Lenoir community. The “2018 Community Health Needs Assessment” identifies local health and medical needs and provides a plan of how Gerald Champion Regional Medical Center (Gerald Champion) will respond to such needs. This document illustrates one way we are meeting our obligations to efficiently deliver medical services.

In compliance with the Affordable Care Act, all not-for-profit hospitals are required to develop a report on the medical and health needs of the communities they serve. We welcome you to review this document not just as part of our compliance with federal law, but of our continuing efforts to meet your health and medical needs.

Gerald Champion will conduct this effort at least once every three years. The report produced three years ago is also available for your review and comment. As you review this plan, please see if, in your opinion, we have identified the primary needs of the community and if you think our intended response will lead to needed improvements.

We do not have adequate resources to solve all the problems identified. Some issues are beyond the mission of the hospital and action is best suited for a response by others. Some improvements will require personal actions by individuals rather than the response of an organization. We view this as a plan for how we, along with other area organizations and agencies, can collaborate to bring the best each has to offer to support change and to address the most pressing identified needs.

Because this report is a response to a federal requirement of not-for-profit hospitals to identify the community benefit they provide in responding to documented community need, footnotes are provided to answer specific tax form questions; for most purposes, they may be ignored. Most importantly, this report is intended to guide our actions and the efforts of others to make needed health and medical improvements in our area.

I invite your response to this report. As you read, please think about how to help us improve health and medical services in our area. We all live in, work in, and enjoy this wonderful community, and together, we can make our community healthier for every one of us.

Thank You,

Jim Heckert
Chief Executive Officer
Gerald Champion Regional Medical Center

Gerald Champion Regional Medical Center, Alamogordo, NM
EXECUTIVE SUMMARY
EXECUTIVE SUMMARY

Gerald Champion Regional Medical Center ("Gerald Champion" or the "Hospital") has performed a Community Health Needs Assessment to determine the health needs of the local community.

Data was gathered from multiple well-respected secondary sources to build an accurate picture of the current community and its health needs. A survey of a select group of Local Experts was performed to review the prior CHNA and provide feedback, and to ascertain whether the previously identified needs are still a priority. A second survey was distributed to the same group that reviewed the data gathered from the secondary sources and determined the Significant Health Needs for the community.

The 2018 Significant Health Needs identified for Otero County are:

1. Access to Primary Care – 2015 Significant Need
2. Behavioral Health – 2015 Significant Need
3. Obesity – 2015 Significant Need
5. Diabetes – 2015 Significant Need

The Hospital will develop implementation strategies for these five needs including activities to continue/pursue, community partners to work alongside, and measures to track progress.
APPROACH
**APPROACH**

Gerald Champion Regional Medical Center ("Gerald Champion" or the "Hospital") is organized as a not-for-profit hospital. A Community Health Needs Assessment (CHNA) is part of the required hospital documentation of “Community Benefit” under the Affordable Care Act (ACA), required of all not-for-profit hospitals as a condition of retaining tax-exempt status. A CHNA helps the hospital identify and respond to the primary health needs of its residents.

This study is designed to comply with standards required of a not-for-profit hospital.\(^2\) Tax reporting citations in this report are superseded by the most recent Schedule H (Form 990) filings made by the hospital.

In addition to completing a CHNA and funding necessary improvements, a not-for-profit hospital must document the following:

- Financial assistance policy and policies relating to emergency medical care
- Billing and collections
- Charges for medical care

Further explanation and specific regulations are available from Health and Human Services (HHS), the Internal Revenue Service (IRS), and the U.S. Department of the Treasury.\(^3\)

**Project Objectives**

Gerald Champion partnered with Quorum Health Resources (Quorum) to:\(^4\)

- Complete a CHNA report, compliant with Treasury – IRS
- Provide the Hospital with information required to complete the IRS – Schedule H (Form 990)
- Produce the information necessary for the Hospital to issue an assessment of community health needs and document its intended response

**Overview of Community Health Needs Assessment**

Typically, non-profit hospitals qualify for tax-exempt status as a Charitable Organization, described in Section 501(c)(3) of the Internal Revenue Code; however, the term 'Charitable Organization' is undefined. Prior to the passage of Medicare, charity was generally recognized as care provided those who did not have means to pay. With the introduction of Medicare, the government met the burden of providing compensation for such care.

In response, IRS Revenue ruling 69-545 eliminated the Charitable Organization standard and established the Community Benefit Standard as the basis for tax-exemption. Community Benefit determines if hospitals promote the health of a broad class of individuals in the community, based on factors including:

---

\(^2\) Federal Register Vol. 79 No. 250, Wednesday December 31, 2014. Part II Department of the Treasury Internal Revenue Service 26 CFR Parts 1, 53, and 602

\(^3\) As of the date of this report all tax questions and suggested answers relate to 2017 Draft Federal 990 Schedule H instructions i990sh—dft(2) and tax form

\(^4\) Part 3 Treasury/IRS – 2011 – 52 Section 3.03 (2) third party disclosure notice & Schedule H (Form 990) V B 6 b
• An Emergency Room open to all, regardless of ability to pay
• Surplus funds used to improve patient care, expand facilities, train, etc.
• A board controlled by independent civic leaders
• All available and qualified physicians granted hospital privileges

Specifically, the IRS requires:

• Effective on tax years beginning after March 23, 2012, each 501(c)(3) hospital facility must conduct a CHNA at least once every three taxable years, and adopt an implementation strategy to meet the community needs identified through the assessment.
• The assessment may be based on current information collected by a public health agency or non-profit organization, and may be conducted together with one or more other organizations, including related organizations.
• The assessment process must take into account input from persons who represent the broad interests of the community served by the hospital facility, including those with special knowledge or expertise of public health issues.
• The hospital must disclose in its annual information report to the IRS (Form 990 and related schedules) how it is addressing the needs identified in the assessment and, if all identified needs are not addressed, the reasons why (e.g., lack of financial or human resources).
• Each hospital facility is required to make the assessment widely available and downloadable from the hospital website.
• Failure to complete a CHNA in any applicable three-year period results in an excise tax to the organization of $50,000. For example, if a facility does not complete a CHNA in taxable years one, two, or three, it is subject to the penalty in year three. If it then fails to complete a CHNA in year four, it is subject to another penalty in year four (for failing to satisfy the requirement during the three-year period beginning with taxable year two and ending with taxable year four).
• An organization that fails to disclose how it is meeting needs identified in the assessment is subject to existing incomplete return penalties.°

Community Health Needs Assessment Subsequent to Initial Assessment

The Final Regulations establish a required step for a CHNA developed after the initial report. This requirement calls for considering written comments received on the prior CHNA and Implementation Strategy as a component of the development of the next CHNA and Implementation Strategy. The specific requirement is:

“The 2013 proposed regulations provided that, in assessing the health needs of its community, a hospital facility must take into account input received from, at a minimum, the following three sources:

° Section 6652
(1) At least one state, local, tribal, or regional governmental public health department (or
equivalent department or agency) with knowledge, information, or expertise relevant to
the health needs of the community;

(2) members of medically underserved, low-income, and minority populations in the
community, or individuals or organizations serving or representing the interests of such
populations; and

(3) written comments received on the hospital facility’s most recently conducted CHNA and
most recently adopted implementation strategy.6

...the final regulations retain the three categories of persons representing the broad interests of
the community specified in the 2013 proposed regulations but clarify that a hospital facility must
“solicit” input from these categories and take into account the input “received.” The Treasury
Department and the IRS expect, however, that a hospital facility claiming that it solicited, but
could not obtain, input from one of the required categories of persons will be able to document
that it made reasonable efforts to obtain such input, and the final regulations require the CHNA
report to describe any such efforts.”

Representatives of the various diverse constituencies outlined by regulation to be active participants in this process
were actively solicited to obtain their written opinion. Opinions obtained formed the introductory step in this
Assessment.

To complete a CHNA:

“... the final regulations provide that a hospital facility must document its CHNA in a CHNA report that is
adopted by an authorized body of the hospital facility and includes:

(1) A definition of the community served by the hospital facility and a description of how the
community was determined;

(2) a description of the process and methods used to conduct the CHNA;

(3) a description of how the hospital facility solicited and took into account input received from
persons who represent the broad interests of the community it serves;

(4) a prioritized description of the significant health needs of the community identified through the
CHNA, along with a description of the process and criteria used in identifying certain health
needs as significant and prioritizing those significant health needs; and

(5) a description of resources potentially available to address the significant health needs identified
through the CHNA.

... final regulations provide that a CHNA report will be considered to describe the process and methods
used to conduct the CHNA if the CHNA report describes the data and other information used in the

6 Federal Register Vol. 79 No. 250, Wednesday December 31, 2014. Part II Department of the Treasury Internal Revenue Service 26 CFR Parts 1, 53,
and 602 P. 78963 and 78964
assessment, as well as the methods of collecting and analyzing this data and information, and identifies any parties with whom the hospital facility collaborated, or with whom it contracted for assistance, in conducting the CHNA.”

Additionally, all CHNAs developed after the very first CHNA must consider written commentary on the prior Assessment and Implementation Strategy efforts. The Hospital followed the Federal requirements in the solicitation of written comments by securing characteristics of individuals providing written comment but did not maintain identification data.

“...the final regulations provide that a CHNA report does not need to name or otherwise identify any specific individual providing input on the CHNA, which would include input provided by individuals in the form of written comments.”

The methodology takes a comprehensive approach to the solicitation of written comments. As previously cited, input was obtained from the required three minimum sources and expanded input to include other representative groups. The Hospital asked all participating in the written comment solicitation process to self-identify themselves into any of the following representative classifications, which is detailed in an Appendix to this report. Written comment participants self-identified into the following classifications:

1. **Public Health** – Persons with special knowledge of or expertise in public health

2. **Departments and Agencies** – Federal, tribal, regional, State, or local health or other departments or agencies, with current data or other information relevant to the health needs of the community served by the hospital facility

3. **Priority Populations** – Leaders, representatives, or members of medically underserved, low income, and minority populations, and populations with chronic disease needs in the community served by the hospital facility. Also, in other federal regulations the term Priority Populations, which include rural residents and LGBT interests, is employed and for consistency is included in this definition

4. **Chronic Disease Groups** – Representative of or member of Chronic Disease Group or Organization, including mental and oral health

5. **Broad Interest of the Community** – Individuals, volunteers, civic leaders, medical personnel, and others to fulfill the spirit of broad input required by the federal regulations

Other (please specify)

The methodology also takes a comprehensive approach to assess community health needs. Perform several independent data analyses based on secondary source data, augment this with Local Expert Advisor opinions, and resolve any data inconsistency or discrepancies by reviewing the combined opinions formed from local experts. The Hospital relies on secondary source data, and most secondary sources use the county as the smallest unit of analysis. Local expert area residents were asked to note if they perceived the problems or needs identified by secondary sources

---

7 Federal Register Op. cit. P 78966 As previously noted the Hospital collaborated and obtained assistance in conducting this CHNA from Quorum Health Resources. Response to Schedule H (Form 990) B 6 b
8 Federal Register Op. cit. P 78967 & Response to Schedule H (Form 990) B 3 h
9 “Local Expert” is an advisory group of at least 15 local residents, inclusive of at least one member self-identifying with each of the five Quorum written comment solicitation classifications, with whom the Hospital solicited to participate in the Quorum/Hospital CHNA process. Response to Schedule H (Form 990) V B 3 h
existed in their portion of the county.\textsuperscript{10}

Most data used in the analysis is available from public Internet sources and proprietary data. Any critical data needed to address specific regulations or developed by the Local Expert Advisor individuals cooperating in this study are displayed in the CHNA report appendix.

Data sources include:\textsuperscript{11}

Federal regulations surrounding CHNA require local input from representatives of particular demographic sectors. For this reason, a standard process of gathering community input was developed. In addition to gathering data from the above sources:

- A CHNA “Round 1” survey was deployed to the Hospital’s Local Expert Advisors to gain input on local health needs and the needs of priority populations. Local Expert Advisors were local individuals selected according to criteria required by the Federal guidelines and regulations and the Hospital’s desire to represent the region’s geographically and ethnically diverse population. Community input from 60 Local Expert Advisors was received.

\textsuperscript{10} Response to Schedule H (Form 990) Part V B 3 i
\textsuperscript{11} The final regulations clarify that a hospital facility may rely on (and the CHNA report may describe) data collected or created by others in conducting its CHNA and, in such cases, may simply cite the data sources rather than describe the “methods of collecting” the data. Federal Register Op. cit. P 78967 & Response to Schedule H (Form 990) Part V B 3 d
Survey responses started April 19, 2018, and ended with the last response on May 4, 2018.

- Information analysis augmented by local opinions showed how Otero County relates to its peers in terms of primary and chronic needs and other issues of uninsured persons, low-income persons, and minority groups. Respondents commented on whether they believe certain population groups (“Priority Populations”) need help to improve their condition, and if so, who needs to do what to improve the conditions of these groups.\(^{12}\)

- Local opinions of the needs of Priority Populations, while presented in its entirety in the Appendix, was abstracted in the following “take-away” bulleted comments
  - Low income residents, older adults, and women are the most prevalent priority groups
  - Mental Health among these populations is also common

When the analysis was complete, the information and summary conclusions were put before the Hospital’s Local Expert Advisors\(^{13}\) who were asked to agree or disagree with the summary conclusions. They were free to augment potential conclusions with additional comments of need.\(^{14}\) Consultation with 22 Local Experts occurred again via an internet-based survey (explained below) beginning May 15, 2018, and ending June 6, 2018.

Having taken steps to identify potential community needs, the Local Experts then participated in a structured communication technique called a "Wisdom of Crowds" method. The premise of this approach relies on a panel of experts with the assumption that the collective wisdom of participants is superior to the opinion of any one individual, regardless of their professional credentials.\(^{15}\)

In the Gerald Champion process, each Local Expert had the opportunity to introduce needs previously unidentified and to challenge conclusions developed from the data analysis. While there were a few opinions of the data conclusions not being completely accurate, most of the comments agreed with the findings. A list of all needs identified by any of the analyzed data was developed. The Local Experts then allocated 100 points among the list of health needs, including the opportunity to list additional needs that were not identified from the data.

The ranked needs were divided into two groups: “Significant” and “Other Identified Needs.” The Significant Needs were prioritized based on total points cast by the Local Experts in descending order, further ranked by the number of local experts casting any points for the need. By definition, a Significant Need had to include all rank ordered needs until at least fifty percent (50%) of all points were included and to the extent possible, represented points allocated by a majority of voting local experts. The determination of the break point — “Significant” as opposed to “Other” — was a qualitative interpretation where a reasonable break point in rank order occurred.\(^{16}\)

COMMUNITY CHARACTERISTICS
Definition of Area Served by the Hospital

For the purposes of this study, Gerald Champion Regional Medical Center defines its service area as Otero County in New Mexico, which includes the following ZIP codes:

- 88081 – Chaparral
- 88310 – Alamogordo
- 88317 – Cloudcroft
- 88330 – Holloman Air Force Base
- 88337 – La Luz
- 88339 – Mayhill
- 88340 – Mescalero
- 88347 – Sacramento
- 88352 – Tularosa
- 88354 – Weed

(Zip codes 88300, 88311, 88325, 88342, 88349, and 88350 are included in the above zip codes)

During 10/1/2015 – 9/30/2016, the Hospital received 80.2% of its patients from this area.

## Customer Segmentation

Claritas Prizm uses Census data, sources of demographic and consumer information, and 30 years of annual consumer surveys to classify all U.S. households into 68 demographically and behaviorally distinct groups. These segments represent clusters of at least 250 households that have comparable characteristics and exhibit similar behaviors. The top segments in Otero County are:

---

23 IBM Watson Health
Each of the 68 Claritas Prizm segments exhibits prevalence toward specific health behaviors. In the second column of the chart below, the national average is 100%, so the ‘Demand as % of National’ shows a community’s likelihood of exhibiting a certain health behavior more or less than the national average. The next column shows the percentage of the population that is likely to exhibit those behaviors.

Where Otero County varies more than 5% above or below the national average (that is, less than 95% or greater than 105%), it is considered noteworthy. Items in the table with red text are viewed as adverse findings. Items with blue text are viewed as beneficial findings. Items with black text are neither a favorable nor unfavorable finding.

Leading Causes of Death

The Leading Causes of Death are determined by official Centers for Disease Control and Prevention (CDC) final death total. New Mexico’s Top 15 Leading Causes of Death are listed in the table below in Otero county’s rank order. Otero county was compared to all other New Mexico counties, New Mexico state average and whether the death rate was higher, lower or as expected compared to the U.S. average.

Priority Populations

Information about Priority Populations in the service area of the Hospital is difficult to encounter if it exists. The Hospital’s approach is to understand the general trends of issues impacting Priority Populations and to interact with the Local Experts to discern if local conditions exhibit any similar or contrary trends. The following discussion examines findings about Priority Populations from a national perspective.

Begin by analyzing the National Healthcare Quality and Disparities Reports (QDR), which are annual reports to Congress mandated in the Healthcare Research and Quality Act of 1999 (P.L. 106-129). These reports provide a comprehensive overview of the quality of healthcare received by the general U.S. population and disparities in care experienced by different racial, ethnic, and socioeconomic groups. The purpose of the reports is to assess the performance of the Hospital’s health system and to identify areas of strengths and weaknesses in the healthcare system along three main axes: access to healthcare, quality of healthcare, and priorities of the National Quality Strategy (NQS). The complete report is provided in Appendix C.

A specific question was asked to the Hospital’s Local Expert Advisors about unique needs of Priority Populations, and their responses were reviewed to identify if there were any report trends in the service area. Accordingly, the Hospital places a great reliance on the commentary received from the Hospital’s Local Expert Advisors to identify unique population needs to which the Hospital should respond. Specific opinions from the Local Expert Advisors are summarized below:26

- Low income residents, older adults, and women are the most prevalent priority groups
- Mental Health among these populations is also common

26 All comments and the analytical framework behind developing this summary appear in Appendix A
Social Vulnerability

Social vulnerability refers to the resilience of communities when confronted by external stresses on human health, such as natural or human-caused disasters, or disease outbreaks.

Overall, Otero County fall into all four quartiles:

- The southern and northeastern part of county are in the highest quartile of vulnerability (dark blue)
- Section in the mid-western part of the county are in the lowest quartile of vulnerability (yellow)
- The rest of the county are in the second lowest and second highest quartiles (light blue and light green)

Comparison to Other State Counties

To better understand the community, Otero County has been compared to all 32 counties in the state of New Mexico across five areas: Health Outcomes, Health Behaviors, Clinical Care, Social & Economic Factors, and Physical Environment. The last four areas are all Health Factors that ultimately affect the Health Outcomes of Length (Mortality) and Quality of Life (Morbidity).

In the chart below, the county’s rank compared to all counties is listed along with any measures in each area that are worse than the state average and U.S. Best (90th percentile).

Comparison to Peer Counties

The Federal Government administers a process to allocate all 3,143 U.S. counties into "Peer" groups. County "Peer" groups have similar social, economic, and demographic characteristics. The counties are ranked across six health and wellness categories and divided into quartiles: Better (top quartile), Moderate (middle two quartiles), and Worse (bottom quartile).

In the below chart, Otero County is compared to its peer counties and the U.S. average, but only areas where the county is Better or Worse are listed. (The list and number of peer counties used in each ranking may differ.)

Conclusions from Demographic Analysis Compared to National Averages

The following areas were identified from a comparison of Otero county to national averages. **Adverse** metrics impacting more than 30% of the population and statistically significantly different from the national average include:

- **14.0% more likely to have a BMI of Morbid/Obese**, affecting 34.7%
- **10.5% less likely to Vigorously Exercise**, affecting 51.1%
- **24.3% more likely to Consume 3+ Drinks per Session**, affecting 35.0%
- **8.4% less likely to receive Routine Cholesterol Screenings**, affecting 40.6%
- **14.6% less likely to receive Cervical Cancer Screening every 2 years**, affecting 41.2%
- **12.4% more likely to have Chronic Lower Back Pain**, affecting 34.7%
- **15.7% less likely to Visit OB/Gyn Annually**, affecting 32.4%
- **9.4% more likely to use the Emergency Room** (for non-emergent issues), affecting 38.0%

**Beneficial** metrics impacting more than 30% of the population and statistically significantly different from the national average include:

- **19.8% less likely to have Consumed Alcohol in the Past 30 Days**, affecting 43.1%
Conclusions from Other Statistical Data

The Institute for Health Metrics and Evaluation at the University of Washington analyzed all 3,143 U.S. counties or equivalents applying small area estimation techniques to the most recent county information. The below chart compares Otero County statistics to the U.S. average, and lists the change since the last date of measurement.

<table>

## Current Date of Data | Statistic | Change | Last Date of Data
--- | --- | --- | ---
**Otero County measures that are BETTER than the U.S. average but got worse**
Female Tracheal, Bronchus, and Lung Cancer | 2014 | 36.1* cases | 7.3% | 1980
Male Malignant Skin Melanoma | 2014 | 4.1* cases | 7.9% | 1980
Female Heavy Drinking | 2012 | 6.2% | 36.9% | 2005
Female Binge Drinking | 2012 | 10.8% | 11.2% | 2002
Male Obesity | 2011 | 33.4% | 36.7% | 2001

**Otero County measures that are BETTER than the US average and improved**
Female Stroke | 2014 | 40.1* cases | -58.0% | 1980
Male Stroke | 2014 | 39.6* cases | -54.6% | 1980
Male Tracheal, Bronchus, and Lung Cancer | 2014 | 55.4* cases | -30.5% | 1980
Male Breast Cancer | 2014 | 0.3* cases | -11.0% | 1980
Male Heavy Drinking | 2012 | 7.9% | -5.1% | 2005
Male Binge Drinking | 2012 | 21.5% | -10.6% | 2002

*Per 100,000 population*
Community Benefit

Worksheet 4 of Form 990 h can be used to report the net cost of community health improvement services and community benefit operations.

“Community health improvement services” means activities or programs, subsidized by the health care organization, carried out or supported for the express purpose of improving community health. Such services do not generate inpatient or outpatient revenue, although there may be a nominal patient fee or sliding scale fee for these services.

“Community benefit operations” means:

- activities associated with community health needs assessments, administration, and
- the organization’s activities associated with fundraising or grant-writing for community benefit programs.

Activities or programs cannot be reported if they are provided primarily for marketing purposes or if they are more beneficial to the organization than to the community. For example, the activity or program may not be reported if it is designed primarily to increase referrals of patients with third-party coverage, required for licensure or accreditation, or restricted to individuals affiliated with the organization (employees and physicians of the organization).

To be reported, community need for the activity or program must be established. Community need can be demonstrated through the following:

- A CHNA conducted or accessed by the organization.
- Documentation that demonstrated community need or a request from a public health agency or community group was the basis for initiating or continuing the activity or program.
- The involvement of unrelated, collaborative tax-exempt or government organizations as partners in the activity or program carried out for the express purpose of improving community health.

Community benefit activities or programs also seek to achieve a community benefit objective, including improving access to health services, enhancing public health, advancing increased general knowledge, and relief of a government burden to improve health. This includes activities or programs that do the following:

- Are available broadly to the public and serve low-income consumers.
- Reduce geographic, financial, or cultural barriers to accessing health services, and if they ceased would result in access problems (for example, longer wait times or increased travel distances).
- Address federal, state, or local public health priorities such as eliminating disparities in access to healthcare services or disparities in health status among different populations.
- Leverage or enhance public health department activities such as childhood immunization efforts.
- Otherwise would become the responsibility of government or another tax-exempt organization.
- Advance increased general knowledge through education or research that benefits the public.
Activities reported by the Hospital in its implementation efforts and/or its prior year tax reporting (FY2017) included:

- $1,652,668
IMPLEMENTATION STRATEGY
Significant Health Needs

The methodology used the priority ranking of area health needs by the Local Expert Advisors to organize the search for locally available resources as well as the response to the needs by Gerald Champion. The following list:

- Identifies the rank order of each identified Significant Need
- Presents the factors considered in developing the ranking
- Establishes a Problem Statement to specify the problem indicated by use of the Significant Need term
- Identifies Gerald Champion current efforts responding to the need including any written comments received regarding prior Gerald Champion implementation actions
- Establishes the Implementation Strategy programs and resources Gerald Champion will devote to attempt to achieve improvements
- Documents the Leading Indicators Gerald Champion will use to measure progress
- Presents the Lagging Indicators Gerald Champion believes the Leading Indicators will influence in a positive fashion, and
- Presents the locally available resources noted during the development of this report as believed to be currently available to respond to this need.

In general, Gerald Champion is the major hospital in the service area. Gerald Champion is a 50-bed, acute care medical facility located in Alamogordo, New Mexico. The next closest facilities are outside the service area and include:

- Mescalero PHS Indian Hospital, Mescalero, NM; 30.0 miles (39 minutes)
- Lincoln County Medical Center, Ruidoso, NM; 46.0 miles (56 minutes)
- MountainView Regional Medical Center, Las Cruces, NM; 70.1 miles (1 hour 14 minutes)
- Memorial Medical Center of Las Cruces, Las Cruces, NM; 74.1 miles (1 hour 16 minutes)

All statistics analyzed to determine significant needs are “Lagging Indicators,” measures presenting results after a period of time, characterizing historical performance. Lagging Indicators tell you nothing about how the outcomes were achieved. In contrast, the Gerald Champion Implementation Strategy uses “Leading Indicators.” Leading Indicators anticipate change in the Lagging Indicator. Leading Indicators focus on short-term performance, and if accurately selected, anticipate the broader achievement of desired change in the Lagging Indicator. In the QHR application, Leading Indicators also must be within the ability of the hospital to influence and measure.

31 Response to IRS Schedule H (Form 990) Part V B 3 e
1. **Access to Primary Care – 2015 Significant Need; Population to Primary Care Provider ratio is worse than NM and US average**

**Public comments received on previously adopted implementation strategy:**

- *Bringing in the pediatricians is good and we know that you do quite a bit of recruiting. We need another pediatrician in the community.*
- *Gerald Champion has been successful in recruiting primary care physicians to this area*
- *Urgent care, new mid-level providers to augment physician shortages*
- *We need more places to walk in a safe place. The hospital would be great for indoor walking*
- *Other than ensuring that they are paid, nothing.*

**Gerald Champion services, programs, and resources available to respond to this need include:**

- Opened an urgent care facility in December 2017, which also includes a Family Practice physician and a nurse practitioner
- Added 6 primary care providers since 2015, with a loss of 2 primary care providers since 2015, for a net gain of 4 providers
- Conducted a Physician Needs Assessment to better understand the community’s need for providers
- Have hired 2 Pediatricians and 1 pediatric nurse practitioner
- Developed a physician referral line to help place patients with a Primary Care provider
- Began publicizing the financial services plan upfront, when needed, that grant patients with household income of three times the Federal poverty level or less ability to receive full write off costs
- Financially subsidize four FQHC locations in Otero County
- Offer low cost sports physicals through open clinics, community health fairs, and other community offerings
- Allergy and Wellness clinics have been established in the community, including initiatives for hospital employees to establish healthy living practices
- Held physician professional fees constant for the past 4 years

**Additionally, Gerald Champion plans to take the following steps to address this need:**

- Will include a Family Medicine residency program within the new urgent care facility
- Ongoing active recruitment of Primary Care providers

---

32 This section in each need for which the hospital plans an implementation strategy responds to Schedule H (Form 990) Part V Section B 3 c
• Establish an eligibility/charity card program for patients lacking the ability to pay, allowing those patients to still receive care at Primary Care physician clinic locations and other eligible location/s, as well as receive necessary prescriptions—including the appointment of a social worker to drive the program
• Add flag within EMR to identify patients qualifying and approved for eligibility/charity card program
• Open ambulatory pharmacy in the community

Gerald Champion evaluation of impact of actions taken since the immediately preceding CHNA:
• Increased primary care appointments in the community by opening an urgent care clinic in December 2017

Anticipated results from Gerald Champion Implementation Strategy

The strategy to evaluate Gerald Champion intended actions is to monitor change in the following Leading Indicator:
• Number of patients utilizing Physician Referral line = 548
• Number of pre-employment screens = 118
• Number of Workman’s Compensation claims = 237
• Average time to Primary Care appointment = A primary care appointment can be obtained within 5 days

The change in the Leading Indicator anticipates appropriate change in the following Lagging Indicator:
• Urgent care volume = 8,875 visits since opening in December 2017
Gerald Champion anticipates collaborating with the following other facilities and organizations to address this Significant Need:

2. Behavioral Health – 2015 Significant Need; #7 leading cause of death and higher than expected compared to the US; Population to Mental Health Provider ratio is worse than the state and national averages

Public comments received on previously adopted implementation strategy:

- The new inpatient behavioral health unit is a step in the right direction. Need to recruit more psychiatrists and child behavioral health specialists.
- This is an absolute necessity in this community and should continue to be a focus
- increased inpatient beds opened new outpatient unit. continue to recruit for providers

Gerald Champion services, programs, and resources available to respond to this need include:

- Spent $5 million on growing inpatient behavioral health unit from 12 to 36 beds with 2 full wings and $2.5m on outpatient behavioral medicine
- Expanded available tracks to include PTSD, Geri-Psych, Co-occurring disorders (i.e., mental health and substance abuse conditions), active duty military
- On-duty court room on GCRMC campus to reduce unnecessary length of stay and free up inpatient beds
- Expanded outpatient Behavioral Health department—Intense Outpatient Program (IOP), Post-Hospitalization Program (PHP)
- Developed electroconvulsive therapy (ECT) program for those patients not responding to courses of medication treatment
- Added 3 Behavioral Health nurse practitioners
- Brought in locums providers to address acute need
- Have hired nurses and committed full Behavioral Health training time to these individuals
- Have begun utilizing tele-psych program in the Emergency Department
- Sitter-type program to keep a line of sight or one-on-one with patients requiring necessary care/visibility
- Expanded presence in Ruidoso—2 days of psych services staffed by a nurse practitioner

Additionally, Gerald Champion plans to take the following steps to address this need:

- Continue to actively recruit at colleges
- Continue to incrementally grow census to ensure individuals needing care are not being missed
- Have a provider, a social worker, in the Emergency Department to ensure patient receives appropriate care
- Offer partial hospitalization services
• Recruit two additional full time Psychiatrist
• Explore outpatient telemedicine to provide needed services
• Offer Transcranial Magnetic Stimulation—physician does initial mapping, nurse administers treatment after initial mapping, and ongoing treatment is short in duration
• Explore clinic outreach to pediatric-specific and non-pediatric Behavioral Medicine locations
• Explore partnership opportunities with school system

Gerald Champion evaluation of impact of actions taken since the immediately preceding CHNA:
• Opened new outpatient behavioral health clinic and expanded inpatient to 36 beds.
• Built inpatient behavioral health court room to decrease length of stay on unit to await court date. Judge comes to unit once a week to preside over court cases such as new guardians.

Anticipated results from Gerald Champion Implementation Strategy

The strategy to evaluate Gerald Champion intended actions is to monitor change in the following Leading Indicator:
• Psychiatric visit availability in Ruidoso same day appointment available
• Bed capacity = 36
• Provider count = 7
• Current level of travel nurses for continuity of care = 2
• Behavioral Health visits in the Emergency Department = to begin tracking
• Behavioral Health length of stay in the Emergency Department to an admitted bed = less than 12 hours

The change in the Leading Indicator anticipates appropriate change in the following Lagging Indicator:
• Recidivism rate = Decrease patients utilizing the emergency department

Gerald Champion anticipates collaborating with the following other facilities and organizations to address this Significant Need:

3. **OBESITY – 2015 Significant Health Need;** Heart disease is the #1 leading cause of death in Otero county and higher than expected compared to the US; Diabetes is the #6 leading cause of death in Otero county and higher than expected compared to the US; Otero county’s physical inactivity rate is higher than the NM average and US best; access to exercise opportunities is below the NM average and US best.

**Public comments received on previously adopted implementation strategy:**

- *Am unaware of any actions taken other than standing up the Wellness Center.*
- *Opened a health and wellness clinic - support local community initiatives*

**Gerald Champion services, programs, and resources available to respond to this need include:**

- Started Wellness Clinic two years ago, including the hiring of a nurse practitioner, a nutritionist, and a certified diabetic clinic educator
- Hired a weight management-focused nurse practitioner in starting a new weight management program—no need of physician referral
- Began a three-year relationship with Blue Cross Blue Shield of New Mexico to drive healthy behavior change amongst employees
- Joined Eat Well Otero program, which includes the addition of healthy options in the cafeteria
- Began offering BMI screens at outpatient clinics
- Sponsor health-focused activities—including 5k runs/walks, pre-work exercise (i.e., yoga and Zoomba) for employees
- Donated equipment to Alamogordo Community Garden

**Additionally, Gerald Champion plans to take the following steps to address this need:**

- Explore the addition of an outpatient nutritionist
- Explore employee wellness programs
- Consider regular seminars related to healthy eating/cooking, exercise, weight management, etc.
- Explore partnership opportunity with local school district
- Explore opportunities to enhance community garden program
- Offer healthy eating options in cafeteria at a reduced cost to incentivize choice

**Gerald Champion evaluation of impact of actions taken since the immediately preceding CHNA:**

- Opened Health and Wellness Clinic
- Worked with the community in Healthy Eating Healthy Living program
- Provided free space for senior exercise program

Anticipated results from Gerald Champion Implementation Strategy

4. CANCER – 2015 Significant Health Need; #2 leading cause of death in Otero county and higher than expected compared to US

Public comments received on previously adopted implementation strategy:

- Not aware of specific actions being taken to address cancer or hire more oncologists.
- Expanding facility
- steps have been taken with the support of the hospital foundation.

Gerald Champion services, programs, and resources available to respond to this need include:

- Actively recruited and hired hematology oncology physician in the community
- Renovated infusion clinic
- Purchased onsite PET-CT
- Recruited and hired a colorectal surgeon who works with relevant cancer cases
- Hired a dermatological nurse practitioner
- Invested in capital improvements for imaging equipment (MRI, CT, PET-CT, fluoroscopy)
- Began offering Genotype DNA testing
- 340B program involvement

Additionally, Gerald Champion plans to take the following steps to address this need:

- Explore expansion of tumor registry program and bolster tumor board
- Renovate and expand cancer center
- Seek out and hire an oncology nurse navigator
- Work to provide more colon cancer screenings
- Work with existing providers to expand cancer expertise (i.e., lung-focused Pulmonologist)
- Consider a rotating specialty clinic

Gerald Champion evaluation of impact of actions taken since the immediately preceding CHNA:

- Hired a Nurse Navigator for cancer program
- Support the cancer resource center, by providing space free of rent and utilities. Purchased prosthetics and bras for mastectomies for patients to receive via the resource center
Anticipated results from Gerald Champion Implementation Strategy

The strategy to evaluate Gerald Champion intended actions is to monitor change in the following Leading Indicator:

- Increase number of colon cancer screenings
- Increase number of mammography screenings
- Current outpatient cancer center renovation and expansion will break ground in 2019

The change in the Leading Indicator anticipates appropriate change in the following Lagging Indicator:

- Decrease outmigration of oncology patients

Gerald Champion anticipates collaborating with the following other facilities and organizations to address this Significant Need:

5. Diabetes – 2015 Significant Health Need; Diabetes is the #6 leading cause of death in Otero county and higher than expected compared to the US; Heart disease is the #1 leading cause of death in Otero county and higher than expected compared to the US; Otero county’s physical inactivity rate is higher than the NM average and US best; access to exercise opportunities is below the NM average and US best

Public comments received on previously adopted implementation strategy:

- Am unaware of any actions taken specifically to address Diabetes. The sole endocrinologist is excellent however.
- Offers nutritional tips
- Diabetes awareness promotion

Gerald Champion services, programs, and resources available to respond to this need include:

- Started Wellness Clinic two years ago, including the hiring of a nurse practitioner, a nutritionist, and a certified diabetic clinic educator
- Began a three-year relationship with Blue Cross Blue Shield of New Mexico to drive healthy behavior change amongst employees
- Joined Eat Well Otero program, which includes the addition of healthy options in the cafeteria
- Began offering BMI screens at outpatient clinics
- Sponsor health-focused activities—including 5k runs/walks, pre-work exercise (i.e., yoga and Zoomba) for employees
- Added a nurse practitioner to existing Endocrinology practice
- A1c screens as a part of the existing CIN quality measures
- Increased FTE count with dedicated dietician resources for inpatient services
- Endocrinologist sees patients once per month in Mescalero Reservation
- Bolstered wound care services

Additionally, Gerald Champion plans to take the following steps to address this need:

- Actively recruit for replacement of diabetic educator position
- Actively recruit for an outpatient nutritionist
- Consider early education opportunities with children about diabetes, effects of the disease, etc. by partnering with school district and relevant community organizations
- Explore opportunities to enhance community garden program
- Offer healthy eating options in cafeteria at a reduced cost to incentivize choice
- Begin diabetic education classes by the end of 2018
- Start offering additional diabetes screenings to ensure early diabetes diagnosis
- Clinics to begin screening diabetic patients for key complications (i.e., foot care, eye care, A1C blood test) by 2019

**Gerald Champion evaluation of impact of actions taken since the immediately preceding CHNA:**
- Hired certified diabetic educator
- Diabetic foot screenings at wound care center

**Anticipated results from Gerald Champion Implementation Strategy**

**The strategy to evaluate Gerald Champion intended actions is to monitor change in the following Leading Indicator:**
- Participation in a community event focused on juvenile-onset diabetes (e.g., diabetes-focused annual program)
- Participation in an adult diabetes community event, possibly in conjunction with the juvenile offering

**The change in the Leading Indicator anticipates appropriate change in the following Lagging Indicator:**
- Adult Diabetes Rate

**Gerald Champion anticipates collaborating with the following other facilities and organizations to address this**

Appendix A – Written Commentary on Prior CHNA (Round 1)

Hospital solicited written comments about its 2015 CHNA. 59 individuals responded to the request for comments. The following presents the information received in response to the solicitation efforts by the hospital. No unsolicited comments have been received.

1. Please indicate which (if any) of the following characteristics apply to you. If none of the following choices apply to you, please give a description of your role in the community.

Congress defines “Priority Populations” to include:

- Racial and ethnic minority groups
- Low-income groups
- Women
- Children
- Older Adults
- Residents of rural areas
- Individuals with special needs including those with disabilities, in need of chronic care, or in need of end-of-life care
- Lesbian Gay Bisexual Transsexual (LGBT)
- People with major comorbidity and complications

2. Do any of these populations exist in your community, and if so, do they have any unique needs that should be addressed?

- Quality medical care to include mental health and pediatric specialties
- Facilities that offer support for adults in overcoming barriers that limit their ability to meet recommendations for daily activity and exercise. (i.e. wellness center, pool.)

36 Responds to IRS Schedule H (Form 990) Part V B 5
• Patient education and specialty services for rural residents who have chronic conditions.
• More home care, better social facilities, better FB posts about health fairs.
• Rural maybe mobile clinics to visit the outlying areas regularly for common issues at the places some cannot get to town from.
• More transportation options. The Zia bus doesn’t run often enough.
• I don’t know of any unique needs other than readily available access to good care without worrying about cost.
• Women’s health issues, specifically cancer and mammograms. Fibromyalgia and mental health issues.
• Health, particularly mental health, needs associated with (chronic) poverty. There’s a limited continuum of care available to older adults - insufficient mid-level care available (too much to handle at home yet unqualified for skilled nursing care). Unknown prevalence of drug abuse in our communities/rural areas and co-morbid disorders - and how that impacts children living in those homes. Prevalence of diabetes and obesity with long-term effects on health.
• Need for mental health services, housing

In the 2015 CHNA, there were seven health needs identified as “significant” or most important:

1. Access to Primary Care
2. Obesity
3. Insurance Affordability
4. Diabetes
5. Cancer
6. Behavioral Health
7. Heart Disease

3. Should the hospital continue to consider the 2015 Significant Health Needs the most important health needs currently confronting residents in the county?

Comments:

• Totally underserved in behavioral health, especially children’s services and adult psychiatry.
• Neo natal, pregnancy and prevention, child care, STDs.
• I have seen to many cases where obese people only want surgery without putting in the effort to try and lose
weight. It is irritating when Medicaid picks up the tab on my tax dollars. I overheard a woman talking about it in Wal-Mart as she was eating fries and a burger. I pay for health insurance and it seems covered but there are many steps that have to be taken prior to surgery.

- Understanding current opioid addiction crisis and it’s relation to current medical practices regarding treatment of chronic pain; learn how this has become an epidemic. Involve medical care providers and chronic pain management providers in understanding their roles in this crisis and work to identify available alternatives such as can be provided by alternative providers such as behavior health providers, chiropractors, etc. Currently, as a practicing chiropractor, I have seen decreasing numbers of PCP referrals for our services over the past 10 years while, at the same time, we’ve seen the opioid epidemic grow exponentially. West Virginia recently signed a bill making it law that MDs must include chiropractic services as part of the referral consideration for pain and chronic pain patients. One of the largest complaints I have from chronic pain VA patients is that their VA doctors hardly ever refer for chiropractic care while continuing to prescribe unwanted, ineffective, and potentially dangerous medications. I would like to see Gerald Champion spearhead a conversation with it’s medical staff about its current policy regarding long-term management of chronic pain and to include in this conversation traditionally under-utilized practitioners, such as chiropractors, and how they may begin to battle opioid addiction while at the same time, offering their patients safe, and effective, alternatives.

- GCRMC has made incredible strides in meeting the above-mentioned needs in our communities: the addition of the urgent care clinic; hiring of more PAs and NPs; purchase of state-of-the-art radiology treatment equipment and a new focus on building a cancer center; recent opening of out-patient behavioral health clinic, and added assistance to Holloman personnel; the addition of the heart cath lab which has already saved an incredible number of lives and a lot of money!

- Awareness of Hemochromatosis

4. Should the Hospital continue to allocate resources to help improve the needs identified in the 2015 CHNA?

Comments:

- Continued efforts intended to improve the culture of health of this community would benefit all. Patients who do choose to take a more active role in self-management of their health condition need our support. Optimizing the culture of health of the community may decrease the obstacles these patients face when intersecting with different aspects of community living: (i.e. restaurant menu options, places to be active that entice a participant, healthier convenient food options where people frequent)
• Pregnancy, child care, childhood nutritional needs, the importance of vaccination.

• Cancer and diabetes seem to be rampant here. It is important to educate and offer services so people know what to look out for and what actions to take. My mother-in-law was diagnosed with Stage 2 breast cancer that spread to two of her lymph nodes. She was unable to schedule in town within 30 days and had to see a provider in Las Cruces.

• Opportunities to partner with other community institutions (i.e., Alamogordo Public Schools and NMSU-Alamogordo) should be pursued. Working with the school system could provide much-needed support to APS with behavioral needs and provide early

5. Are there any new or additional health needs the Hospital should address? Are there any new or additional implementation efforts the Hospital should take? Please describe.

• Improve documentation and quality of care provided and across the board.

• Emergency Room needs to be equipped with personal who listen to all the problems of a patient and not make decisions based on one part of patients complaint

• ER visits are too long

• Training of staff on procedures for handling patients and cleanliness of both.

• Focus on childhood obesity.

• Affordable allergy clinic for testing and medications.

• Our highest need encountered is housing and homelessness.

• Again, pregnancy, birth control, early childhood vaccination, childhood nutrition.

• Fibromyalgia and mental health needs. I have to drive to El Paso and Las Cruces for services. A migraine clinic would be helpful.

• Dermatology and Podiatry. With the sun have such serious effects on so many people (who travel to Las Cruces and El Paso for services), it would be beneficial to the community to have a full-time dermatologist on staff.

• Pulmonary/Respiratory

• Awareness of Hemochromatosis

6. Please share comments or observations about keeping ACCESS TO PRIMARY CARE among the most significant needs for the Hospital to address.

• Healthy lifestyles are more expensive and make it difficult for much of the working class. Local statics show that we have high diabetes, high blood pressure, and obesity rates. Need to be more proactive in addressing these types of issues in the long-term. This is a cultural issue that will take time (decades) to address.

• There are increasing civilians moving to Alamogordo to maintain the planes for the training mission at the 49th Wing therefore, there needs to be more Primary Care Managers and Pediatricians.
• GCRMC has made significant strides in improving all the above areas. I believe a challenge is ‘getting the word out’.

• Physician recruitment seems to be a continuing process

• Additional clinics needed in surrounding rural communities.

• need more internal medicine physicians the new urgent care center is a great improvement

• GCRMC is all about our community! They are doing all they can to bring all health care needs to our front doors... so we don’t have to travel

• Need for more Drs that will take poor people

• I believe a mobile clinic that travels to the outlying towns on a regular rotation would be an incredibly valuable tool in increasing access to primary care.

• Need more Primary care providers that accept Medicaid.

• Where else are we going to go?

• I believe that Gerald Champion has addressed this with its addition of the Urgent Care on 1st Street.

• I am/our family is thankful for the recent opening of the Urgent Care center and Family Care clinic. We live on the south side of town and appreciate having a facility closer to our home and employment. At least two family members have been to the clinic since it opened (flu). This summer I turn 65 and I am looking forward to (hopefully) having Jana McBurney as my primary care provider. She has been taking care of me for several years while assigned to Holloman. Thank you for bringing her on board.

7. Please share comments or observations about the implementation actions the Hospital has taken to address ACCESS TO PRIMARY CARE.

• Bringing in the pediatricians is good and we know that you do quite a bit of recruiting. We need another pediatrician in the community.

• Gerald Champion has been successful in recruiting primary care physicians to this area

• Urgent care, new mid level providers to augment physician shortages

• We need more places to walk in a safe place. The hospital would be great for indoor walking

• Other than ensuring that they are paid, nothing.

8. Please share comments or observations about keeping OBESITY among the most significant needs for the Hospital to address.

• New Mexico does have a high incidence of obesity which affects healthcare and work force.

• There are enough services provided to address this need

• Keep nutritional guidance services and add further support for overcoming barriers to physical activity
• I do not rate obesity as a priority for the hospital

• Obesity is a national as well as a community problem. Anything we can do to help people learn how to manage their weight - and hopefully influence family members (especially children) - is a good thing.

9. Please share comments or observations about the implementation actions the Hospital has taken to address OBESITY.
   • Am unaware of any actions taken other than standing up the Wellness Center.
   • Opened a health and wellness clinic - support local community initiatives

10. Please share comments or observations about keeping INSURANCE AFFORDABILITY among the most significant needs for the Hospital to address.
    • From my knowledge Gerald Champion accepts most insurances
    • Financial barriers remain an obstacle for many patients.
    • seeing an increase in patients with no insurance
    • Unless GCRMC is secretly lobbying the state insurance board to keep the ACA, nothing.
    • This is an area about which I do not know enough to offer comments.

11. Please share comments or observations about the implementation actions the Hospital has taken to address INSURANCE AFFORDABILITY.
    • charity care program
    • People needs help

12. Please share comments or observations about keeping DIABETES among the most significant needs for the Hospital to address.
    • New Mexico does have a high incidence of diabetes which affects healthcare and local work force.
    • Excellent endocrinologist
    • This remains a major health concern that requires continued attention.
    • The need continues
    • We care... have classes
    • The wound care center was mentioned. This is a huge plus for our community. I have had several friends who would make innumerable trips to El Paso for bariatric treatments at a huge cost of time as well as money.
13. Please share comments or observations about the implementation actions the Hospital has taken to address **DIABETES**.

- Am unaware of any actions taken specifically to address Diabetes. The sole endocrinologist is excellent however.
- Offers nutritional tips
- diabetes awareness promotion

14. Please share comments or observations about keeping **CANCER** among the most significant needs for the Hospital to address.

- It would be helpful for patients not to have to travel to Albuquerque or Las Cruces for state of the art cancer care. The travel adds additional stress to patients at a critical time in their lives.
- As a cancer patient at GCRMC, I believe too many people are unaware of the services available HERE and leave Alamogordo unnecessarily.
- This is a vital service provided to this community.
- need improvement in current clinic
- We will be building a bigger and better place
- So many friends and family members have been diagnosed with cancer. Not having to drive to El Paso or ABQ for treatment is a huge benefit to our community - and to know that the treatment they are receiving is state-of-the-art or just as effective as top hospitals is a huge relief.

15. Please share comments or observations about the implementation actions the Hospital has taken to address **CANCER**.

- Not aware of specific actions being taken to address cancer or hire more oncologists.
- Expanding facility
- steps have been taken with the support of the hospital foundation.

16. Please share comments or observations about keeping **BEHAVIORAL HEALTH** among the most significant needs for the Hospital to address.

- New Mexico is chronically underserved for behavioral health, especially in southern New Mexico.
- Expanding facility.
- the need is great in southern new mexico especially for pediatrics
- GCRMC has stepped up to meet these needs also
- I worry about our society - the levels of stressors that increasingly impact everyone. Anything we can do to offer hope and intervention in our community is essential - to all ages.

17. Please share comments or observations about the implementation actions the Hospital has taken to address
BEHAVIORAL HEALTH.

- The new inpatient behavioral health unit is a step in the right direction. Need to recruit more psychiatrists and child behavioral health specialists.
- This is an absolute necessity in this community and should continue to be a focus
- Increased inpatient beds opened new outpatient unit. Continue to recruit for providers

18. Please share comments or observations about keeping HEART DISEASE among the most significant needs for the Hospital to address.

- One of the most significant health issues in the country.
- Have seen this service grow in this community
- Continued need for education and prevention
- I believe GCRMC has the best heart doctors
- We need better cardiac drs so we don’t have to go to cruces or Elpaso for them
- Remove the current head of Cardiology and replace him with someone less reliant on God to do life saving.
- I would like to see more public education on various topics (obesity, diabetes, wound care, behavioral health) to include heart disease and prevention. I am so thankful that we have such an excellent facility in the community which can quickly address the needs of folks dealing with coronary issues.

19. Please share comments or observations about the implementation actions the Hospital has taken to address HEART DISEASE.

- Need to improve on documentation and staffing for the cardiac catheterization lab.
- Recruitment of providers, opened heart cath lab, started cardiac rehab program
- So far, so good but a full cardiac treatment center is needed not just bits and pieces

20. Finally, after thinking about our questions and the information we seek, is there anything else you think is important as we review and revise our thinking about significant health needs in the county?

- There is not enough primary care or behavioral health care to support permanent population or to support the 49th Wing at Holloman AFB. Behavioral Health care is a great need for our wounded warrior community.
- I have been happy with the services provided by Gerald Champion and I feel that the services provided will continue to grow to meet the need of this community
- When attempting to meet the needs of the community, it should be recognized that each encounter role models or sends a message about health to the patient. What is the atmosphere? What foods are offered in cafeteria and vending machines. Is the personnel supported and encouraged to also have healthy behaviors? Do the
personnel seem happy, healthy and active? In other words is the culture of health of the hospital in synch with what is desired for the community. Thinking about this aspect of the patient encounter and its potential power of suggestion may be considered an action step to meeting the health needs of the community.

- **Dermatologist is what Otero County needs...I LOVE OUR HOSPITAL! THEY ARE ALWAYS IMPROVING...**
- **Shorten ER visit times**
- **Shut in health, preventative medicine, not just treating symptoms, treat the illness, and rural clinic/mobile clinic access for outlying areas.**
- **Access to healthcare includes having transportation to the appointment. Individuals don’t like or are not able to wait for an hour after an appointment for transportation back to their home or to the pharmacy. For some individuals it is a 2 hour ride from the hospital to the Walker Road area.**
- **Review HIPPA compliance through out GCRMC starting at the reception desk. Change the head of cardiology, keep the dogs out of the hospital.**
- **As a community member, I feel a profound sense of thankfulness that we have such a diverse, top-notch, willing to grow and improve medical center in our midst. Please continue to move forward and lead the way for other rural hospitals!**

37 Responds to IRS Schedule H (Form 990) Part V B 3 g
Advice Received from Local Expert Advisors

Question: Do you agree with the comparison of Otero County to all other New Mexico counties?

Comments:

- Unfortunately despite efforts to improve health statistics, culture, lack of job opportunities, and a fledgling education system hold us back. Striving to improve the areas and large spread areas with limited resources impact all categories.

- With the great weather we have and trails provided by the City, I do not believe Exercise Opportunities are lower than NM average. However, if people don’t get out there and take advantage of it, that is on them. For the same reason (climate) I believe the Physical Environment should rank higher.

- Otero County remains medically underserved. Although some physicians communicate well with their patients and devise individual care plans the many do not ensure patient understanding and pay no attention to patient circumstances. I believe the military presence increases the education level.

- I have no doubt the data is accurate (as accurate as can be).
Question: Do you agree with the comparison of Otero County to its peer counties?

[Circle diagram showing 90.0% Yes, 10.0% No]

Comments:

- There is no data listed. Hard to answer.
- Again, I have no doubt the data is as accurate as is possible. Very disturbed by trends and how poorly Otero County ranks in the various factors.
- Unfortunately, Teen Births is a big issue here in Otero County. Alamogordo, Tularosa, and Mescalero are all problem areas.
Question: Do you agree with the demographics and common health behaviors of Otero County?

![Pie chart showing 95.0% agreement and 5.0% disagreement.]

- Yes, the data accurately reflects my community today
- No, the data does not reflect my community today

Comments:
- I am surprised by the population estimate. that is much higher than the last estimate I saw which I believe was from 2016.
Question: Do you agree with the overall social vulnerability index for Otero County?

![Pie chart showing 85.0% agree and 15.0% disagree]

Comments:

- These graphics do not make sense because you are showing household composition information in areas of the county where no one lives.

- Otero County encompasses an extremely large rural area to include considerable federal property (Ft. Bliss/MacGregor Range and the Lincoln National Forest). While there is no doubt that individuals and pockets of small communities do fall within the realms of vulnerability, I’m not sure that the above displays provide such far-ranging accuracy.
Question: Do you agree with the national rankings and leading causes of death?

- Yes, the data accurately reflects my community today (95.0%)
- No, the data does not reflect my community today (5.0%)

Comments:

- What exactly is meant by blood poisoning?

- Interesting! I can only assume the kidney rates are related to the diabetes rates

- Alcohol related death impact is something we are extremely high in as a state, and a county. It not listed here. It impacts accidental death, suicide, homicide, and liver disease
Question: Do you agree with the health trends in Otero County?

84.0%
16.0%

- Yes, the data accurately reflects my community today
- No, the data does not reflect my community today

Comments:

- Unfortunately, despite efforts to improve health statistics, culture, lack of job opportunities, and a fledgling education system hold us back. Striving to improve the areas and large spread areas with limited resources impact all categories.

- With the great weather we have, and trails provided by the City, I do not believe Exercise Opportunities are lower than NM average. However, if people don’t get out there and take advantage of it, that is on them. For the same reason (climate) I believe the Physical Environment should rank higher.

- Otero County remains medically underserved. Although some physicians communicate well with their patients and devise individual care plans the many do not ensure patient understanding and pay no attention to patient circumstances. I believe the military presence increases the education level.

- I have no doubt the data is accurate (as accurate as can be).
Question: Do you agree with the written comments received on the 2015 CHNA?

Comments:

- There are a few statements that I do not agree on.
- *I feel our biggest need is appropriately trained & stable Primary Care Providers and a focus on drug & mental health education.*
- *I too suffer from Hemochromatosis. Dermatology locally would be good. Glad to see the local allergy clinic up and running.*
- *I have seen real improvements in the ER and in their willingness to partner with community. I agree that diabetes management and prevention needs to be a priority.*
- Yes, and *housing is a huge need. I also don’t see anything about suicide prevention which needs to be addressed.*

84.0% Yes, the data accurately reflects my community today
16.0% No, the data does not reflect my community today
Appendix C – National Healthcare Quality and Disparities Report

The National Healthcare Quality and Disparities Reports (QDR) (annual reports to Congress mandated in the Healthcare Research and Quality Act of 1999 (P.L. 106-129)) are based on more than 250 measures of quality and disparities covering a broad array of healthcare services and settings. Data are generally available through 2012, although rates of un-insurance have been tracked through the first half of 2014. The reports are produced with the help of an Interagency Work Group led by the Agency for Healthcare Research and Quality (AHRQ) and submitted on behalf of the Secretary of Health and Human Services (HHS).

Beginning with this 2014 report, findings on healthcare quality and healthcare disparities are integrated into a single document. This new National Healthcare Quality and Disparities Report (QDR) highlights the importance of examining quality and disparities together to gain a complete picture of healthcare. This document is also shorter and focuses on summarizing information over the many measures that are tracked; information on individual measures will still be available through chartbooks posted on the Web (www.ahrq.gov/research/findings/nhqrdr/2014chartbooks/).

The key findings of the 2014 QDR are organized around three axes: access to healthcare, quality of healthcare, and NQS priorities.

To obtain high-quality care, Americans must first gain entry into the healthcare system. Measures of access to care tracked in the QDR include having health insurance, having a usual source of care, encountering difficulties when seeking care, and receiving care as soon as wanted. Historically, Americans have experienced variable access to care based on race, ethnicity, socioeconomic status, age, sex, disability status, sexual orientation, and residence location.

ACCESS: After years without improvement, the rate of un-insurance among adults ages 18-64 decreased substantially during the first half of 2014.

The Affordable Care Act is the most far-reaching effort to improve access to care since the enactment of Medicare and Medicaid in 1965. Provisions to increase health insurance options for young adults, early retirees, and Americans with pre-existing conditions were implemented in 2010. Open enrollment in health insurance marketplaces began in October 2013 and coverage began in January 2014. Expanded access to Medicaid in many states began in January 2014, although a few had opted to expand Medicaid earlier.

Trends

- From 2000 to 2010, the percentage of adults ages 18-64 who reported they were without health insurance coverage at the time of interview increased from 18.7% to 22.3%.
- From 2010 to 2013, the percentage without health insurance decreased from 22.3% to 20.4%.
- During the first half of 2014, the percentage without health insurance decreased to 15.6%.
- Data from the Gallup-Healthways Well-Being Index indicate that the percentage of adults without health insurance continued to decrease through the end of 2014, consistent with these trends.

---

38 http://www.ahrq.gov/research/findings/nhqrdr/nhqrdr14/index.html Responds to IRS Schedule H (Form 990) Part V B 3 i
ACCESS: Between 2002 and 2012, access to health care improved for children but was unchanged or significantly worse for adults.

Trends

- From 2002 to 2012, the percentage of people who were able to get care and appointments as soon as wanted improved for children but did not improve for adults ages 18-64.

Disparities

- Children with only Medicaid or CHIP coverage were less likely to get care as soon as wanted compared with children with any private insurance in almost all years.
- Adults ages 18-64 who were uninsured or had only Medicaid coverage were less likely to get care as soon as wanted compared with adults with any private insurance in all years.

Trends

- Through 2012, most access measures improved for children. The median change was 5% per year.
- Few access measures improved substantially among adults. The median change was zero.

ACCESS DISPARITIES: During the first half of 2014, declines in rates of un-insurance were larger among Black and Hispanic adults ages 18-64 than among Whites, but racial differences in rates remained.

Trends

- Historically, Blacks and Hispanics have had higher rates of un-insurance than Whites.40

Disparities

- During the first half of 2014, the percentage of adults ages 18-64 without health insurance decreased more quickly among Blacks and Hispanics than Whites, but differences in un-insurance rates between groups remained.
- Data from the Urban Institute’s Health Reform Monitoring System indicate that between September 2013 and September 2014, the percentage of Hispanic and non-White non-Hispanic adults ages 18-64 without health insurance decreased to a larger degree in states that expanded Medicaid under the Affordable Care Act than in states that did not expand Medicaid.41

ACCESS DISPARITIES: In 2012, disparities were observed across a broad spectrum of access measures. People in poor households experienced the largest number of disparities, followed by Hispanics and Blacks.

Disparities

- In 2012, people in poor households had worse access to care than people in high-income households on all access measures (green).

---

40 In this report, racial groups such as Blacks and Whites are non-Hispanic, and Hispanics include all races.
• Blacks had worse access to care than Whites for about half of access measures.
• Hispanics had worse access to care than Whites for two-thirds of access measures.
• Asians and American Indians and Alaska Natives had worse access to care than Whites for about one-third of access measures.

ACCESS DISPARITIES: Through 2012, across a broad spectrum of access measures, some disparities were reduced but most did not improve.

Disparity Trends

• Through 2012, most disparities in access to care related to race, ethnicity, or income showed no significant change (blue), neither getting smaller nor larger.
• In four of the five comparisons shown above, the number of disparities that were improving (black) exceeded the number of disparities that were getting worse (green).

QUALITY: Quality of health care improved generally through 2012, but the pace of improvement varied by measure.

Trends

• Through 2012, across a broad spectrum of measures of health care quality, 60% showed improvement (black).
• Almost all measures of Person-Centered Care improved.
• About half of measures of Effective Treatment, Healthy Living, and Patient Safety improved.
• There are insufficient numbers of reliable measures of Care Coordination and Care Affordability to summarize in this way.

QUALITY: Through 2012, the pace of improvement varied across NQS priorities.

Trends

• Through 2012, quality of health care improved steadily but the median pace of change varied across NQS priorities:
  ▪ Median change in quality was 3.6% per year among measures of Patient Safety.
  ▪ Median improvement in quality was 2.9% per year among measures of Person-Centered Care.
  ▪ Median improvement in quality was 1.7% per year among measures of Effective Treatment.
  ▪ Median improvement in quality was 1.1% per year among measures of Healthy Living.
  ▪ There were insufficient data to assess Care Coordination and Care Affordability.

QUALITY: Publicly reported CMS measures were much more likely than measures reported by other sources to achieve high levels of performance.

Achieved Success

Eleven quality measures achieved an overall performance level of 95% or better this year. At this level, additional improvement is limited, so these measures are no longer reported in the QDR. Of measures that achieved an overall
performance level of 95% or better this year, seven were publicly reported by CMS on the Hospital Compare website (italic).

- Hospital patients with heart attack given percutaneous coronary intervention within 90 minutes
- Adults with HIV and CD4 cell count of 350 or less who received highly active antiretroviral therapy during the year
- Hospital patients with pneumonia who had blood cultures before antibiotics were administered
- Hospital patients age 65+ with pneumonia who received pneumococcal screening or vaccination
- Hospital patients age 50+ with pneumonia who received influenza screening or vaccination
- Hospital patients with heart failure and left ventricular systolic dysfunction who were prescribed angiotensin-converting enzyme or angiotensin receptor blocker at discharge
- Hospital patients with pneumonia who received the initial antibiotic dose consistent with current recommendations
- Hospital patients with pneumonia who received the initial antibiotic dose within 6 hours of arrival
- Adults with HIV and CD4 cell counts of 200 or less who received Pneumocystis pneumonia prophylaxis during the year
- People with a usual source of care for whom health care providers explained and provided all treatment options
- Hospice patients who received the right amount of medicine for pain management

Last year, 14 of 16 quality measures that achieved an overall performance level of 95% or better were publicly reported by CMS. Measures that reach 95% and are no longer reported in the QDR continue to be monitored when data are available to ensure that they do not fall below 95%.

Improving Quickly

Through 2012, a number of measures showed rapid improvement, defined as an average annual rate of change greater than 10% per year. Of these measures that improved quickly, four are adolescent vaccination measures (italic).

- Adolescents ages 16-17 years who received 1 or more doses of tetanus-diphtheria-acellular pertussis vaccine
- Adolescents ages 13-15 years who received 1 or more doses of tetanus-diphtheria-acellular pertussis vaccine
- Hospital patients with heart failure who were given complete written discharge instructions
- Adolescents ages 16-17 years who received 1 or more doses of meningococcal conjugate vaccine
- Adolescents ages 13-15 years who received 1 or more doses of meningococcal conjugate vaccine
- Patients with colon cancer who received surgical resection that included 12+ lymph nodes pathologically examined
- Central line-associated bloodstream infection per 1,000 medical and surgical discharges, age 18+ or obstetric admissions
- Women with Stage I-IIb breast cancer who received axillary node dissection or sentinel lymph node biopsy at
time of surgery

Worsening

Through 2012, a number of measures showed worsening quality. Of these measures that showed declines in quality, three track chronic diseases (italic). Note that these declines occurred prior to implementation of most of the health insurance expansions included in the Affordable Care Act.

- Maternal deaths per 100,000 live births
- Children ages 19-35 months who received 3 or more doses of Haemophilus influenzae type b vaccine
- People who indicate a financial or insurance reason for not having a usual source of care
- Suicide deaths per 100,000 population
- Women ages 21-65 who received a Pap smear in the last 3 years
- Admissions with diabetes with short-term complications per 100,000 population, age 18+
- Adults age 40+ with diagnosed diabetes who had their feet checked for sores or irritation in the calendar year
- Women ages 50-74 who received a mammogram in the last 2 years
- Postoperative physiologic and metabolic derangements per 1,000 elective-surgery admissions, age 18+
- People with current asthma who are now taking preventive medicine daily or almost daily
- People unable to get or delayed in getting needed medical care, dental care, or prescription medicines due to financial or insurance reasons

QUALITY DISPARITIES: Disparities remained prevalent across a broad spectrum of quality measures. People in poor households experienced the largest number of disparities, followed by Blacks and Hispanics.

Disparities

- People in poor households received worse care than people in high-income households on more than half of quality measures (green).
- Blacks received worse care than Whites for about one-third of quality measures.
- Hispanics, American Indians and Alaska Natives, and Asians received worse care than Whites for some quality measures and better care for some measures.
- For each group, disparities in quality of care are similar to disparities in access to care, although access problems are more common than quality problems.

QUALITY DISPARITIES: Through 2012, some disparities were getting smaller but most were not improving across a broad spectrum of quality measures.

Disparity Trends

- Through 2012, most disparities in quality of care related to race, ethnicity, or income showed no significant change (blue), neither getting smaller nor larger.
• When changes in disparities occurred, measures of disparities were more likely to show improvement (black) than decline (green). However, for people in poor households, more measures showed worsening disparities than improvement.

QUALITY DISPARITIES: Through 2012, few disparities in quality of care were eliminated while a small number became larger.

Disparities Trends

• Through 2012, several disparities were eliminated.
  ▪ One disparity in vaccination rates was eliminated for Blacks (measles-mumps-rubella), Asians (influenza), American Indians and Alaska Natives (hepatitis B), and people in poor households (human papillomavirus).
  ▪ Four disparities related to hospital adverse events were eliminated for Blacks.
  ▪ Three disparities related to chronic diseases and two disparities related to communication with providers were eliminated for Asians.
  ▪ On the other hand, a few disparities grew larger because improvements in quality for Whites did not extend uniformly to other groups.
  ▪ At least one disparity related to hospice care grew larger for Blacks, American Indians and Alaska Natives, and Hispanics.
  ▪ People in poor households experienced worsening disparities related to chronic diseases.

QUALITY DISPARITIES: Overall quality and racial/ethnic disparities varied widely across states and often not in the same direction.

Geographic Disparities

• There was significant variation in quality among states. There was also significant variation in disparities.

• States in the New England, Middle Atlantic, West North Central, and Mountain census divisions tended to have higher overall quality while states in the South census region tended to have lower quality.

• States in the South Atlantic, West South Central, and Mountain census divisions tended to have fewer racial/ethnic disparities while states in the Middle Atlantic, West North Central, and Pacific census divisions tended to have more disparities.

• The variation in state performance on quality and disparities may point to differential strategies for improvement.

Hospital-acquired conditions have been targeted for improvement by the CMS Partnership for Patients initiative, a major public-private partnership working to improve the quality, safety, and affordability of health care for all Americans. As a result of this and other federal efforts, such as Medicare’s Quality Improvement Organizations and the HHS National Action Plan to Prevent Health Care-Associated Infections, as well as the dedication of practitioners, the general trend in patient safety is one of improvement.
Trends

- From 2010 to 2013, the overall rate of hospital-acquired conditions declined from 145 to 121 per 1,000 hospital discharges.
- This decline is estimated to correspond to 1.3 million fewer hospital-acquired conditions, 50,000 fewer inpatient deaths, and $12 billion savings in health care costs.\(^{42}\)
- Large declines were observed in rates of adverse drug events, healthcare-associated infections, and pressure ulcers.
- About half of all Patient Safety measures tracked in the QDR improved.
- One measure, admissions with central line-associated bloodstream infections, improved quickly, at an average annual rate of change above 10% per year.
- One measure, postoperative physiologic and metabolic derangements during elective-surgery admissions, got worse over time.

Disparities Trends

- Black-White differences in four Patient Safety measures were eliminated.
- Asian-White differences in admissions with iatrogenic pneumothorax grew larger.

National Quality Strategy: Measures of Person-Centered Care improved steadily, especially for children.

Trends

- From 2002 to 2012, the percentage of children whose parents reported poor communication significantly decreased overall and among all racial/ethnic and income groups.
- Almost all Person-Centered Care measures tracked in the QDR improved; no measure got worse.

Disparities

In almost all years, the percentage of children whose parents reported poor communication with their health providers was:

- Higher for Hispanics and Blacks compared with Whites.
- Higher for poor, low-income, and middle-income families compared with high-income families.

Disparities Trends

- Asian-White differences in two measures related to communication were eliminated.
- Four Person-Centered Care disparities related to hospice care grew larger.

National Quality Strategy: Measures of Care Coordination improved as providers enhanced discharge processes and adopted health information technologies.

Trends

- From 2005 to 2012, the percentage of hospital patients with heart failure who were given complete written discharge instructions increased overall, for both sexes, and for all racial/ethnic groups.
- There are few measures to assess trends in Care Coordination.

Disparities

- In all years, the percentage of hospital patients with heart failure who were given complete written discharge instructions was lower among American Indians and Alaska Natives compared with Whites.

National Quality Strategy: Many measures of Effective Treatment achieved high levels of performance, led by measures publicly reported by CMS on Hospital Compare.

Trends

- From 2005 to 2012, the percentage of hospital patients with heart attack given percutaneous coronary intervention within 90 minutes of arrival increased overall, for both sexes, and for all racial/ethnic groups.
- In 2012, the overall rate exceeded 95%; the measure will no longer be reported in the QDR.
- Eight other Effective Treatment measures achieved overall performance levels of 95% or better this year, including five measures of pneumonia care and two measures of HIV care.
- About half of all Effective Treatment measures tracked in the QDR improved.
- Two measures, both related to cancer treatment, improved quickly, at an average annual rate of change above 10% per year.
- Three measures related to management of chronic diseases got worse over time.

Disparities

- As rates topped out, absolute differences between groups became smaller. Hence, disparities often disappeared as measures achieved high levels of performance.

Disparities Trends

- Asian-White differences in three chronic disease management measures were eliminated but income-related disparities in two measures related to diabetes and joint symptoms grew larger.

National Quality Strategy: Healthy Living improved in about half of the measures followed, led by selected adolescent vaccines from 2008 to 2012.

Trends

- From 2008 to 2012, the percentage of adolescents ages 16-17 years who received 1 or more doses of meningococcal conjugate vaccine increased overall, for residents of both metropolitan and nonmetropolitan areas, and for all income groups.
• About half of all Healthy Living measures tracked in the QDR improved.

• Four measures, all related to adolescent immunizations, improved quickly, at an average annual rate of change above 10% per year (meningococcal vaccine ages 13-15 and ages 16-17; tetanus-diphteria-acellular pertussis vaccine ages 13-15 and ages 16-17).

• Two measures related to cancer screening got worse over time.

**Disparities**

• Adolescents ages 16-17 in nonmetropolitan areas were less likely to receive meningococcal conjugate vaccine than adolescents in metropolitan areas in all years.

• Adolescents in poor, low-income, and middle-income households were less likely to receive meningococcal conjugate vaccine than adolescents in high-income households in almost all years.

**Disparities Trends**

• Four disparities related to child and adult immunizations were eliminated.

• Black-White differences in two Healthy Living measures grew larger.

**National Quality Strategy: Measures of Care Affordability worsened from 2002 to 2010 and then leveled off.**

From 2002 to 2010, prior to the Affordable Care Act, care affordability was worsening. Since 2010, the Affordable Care Act has made health insurance accessible to many Americans with limited financial resources.

**Trends**

• From 2002 to 2010, the overall percentage of people unable to get or delayed in getting needed medical care, dental care, or prescription medicines and who indicated a financial or insurance reason rose from 61.2% to 71.4%.

• From 2002 to 2010, the rate worsened among people with any private insurance and among people from high- and middle-income families; changes were not statistically significant among other groups.

• After 2010, the rate leveled off, overall and for most insurance and income groups.

• Data from the Commonwealth Fund Biennial Health Insurance Survey indicate that cost-related problems getting needed care fell from 2012 to 2014 among adults.43

• Another Care Affordability measure, people without a usual source of care who indicate a financial or insurance reason for not having a source of care, also worsened from 2002 to 2010 and then leveled off.

• There are few measures to assess trends in Care Affordability.

**Disparities**

• In all years, the percentage of people unable to get or delayed in getting needed medical care, dental care, or

---

prescription medicines who indicated a financial or insurance reason for the problem was:

- Higher among uninsured people and people with public insurance compared with people with any private insurance.
- Higher among poor, low-income, and middle-income families compared with high-income families.

CONCLUSION

The 2014 Quality and Disparities Reports demonstrate that access to care improved. After years of stagnation, rates of un-insurance among adults decreased in the first half of 2014 as a result of Affordable Care Act insurance expansion. However, disparities in access to care, while diminishing, remained.

Quality of healthcare continued to improve, although wide variation across populations and parts of the country remained. Among the NQS priorities, measures of Person-Centered Care improved broadly. Most measures of Patient Safety, Effective Treatment, and Healthy Living also improved, but some measures of chronic disease management and cancer screening lagged behind and may benefit from additional attention. Data to assess Care Coordination and Affordable Care were limited and measurement of these priorities should be expanded.
Appendix E – Illustrative Schedule H (Form 990) Part V B Potential Response

Illustrative IRS Schedule h Part V Section B (Form 990)44

Community Health Need Assessment Illustrative Answers

1. Was the hospital facility first licensed, registered, or similarly recognized by a State as a hospital facility in the current tax year or the immediately preceding tax year?
   No

2. Was the hospital facility acquired or placed into service as a tax-exempt hospital in the current tax year or the immediately preceding tax year? If “Yes,” provide details of the acquisition in Section C
   No

3. During the tax year or either of the two immediately preceding tax years, did the hospital facility conduct a community health needs assessment (CHNA)? If “No,” skip to line 12. If “Yes,” indicate what the CHNA report describes (check all that apply)

   a. A definition of the community served by the hospital facility
      See footnote 17 on page 11

   b. Demographics of the community
      See footnote 20 on page 12

   c. Existing health care facilities and resources within the community that are available to respond to the health needs of the community
      See footnote 32 on page 33

   d. How data was obtained
      See footnote 11 on page 8

   e. The significant health needs of the community
      See footnote 31 on page 32

   f. Primary and chronic disease needs and other health issues of uninsured persons, low-income persons, and minority groups
      See footnote 12 on page 9

   g. The process for identifying and prioritizing community health needs and services to meet the community health needs
      See footnote 36 on page 52

   h. The process for consulting with persons representing the community's interests

---

44 Questions are drawn from 2014 Federal 990 schedule H.pdf and may change when the hospital is to make its 990 H filing
i. Information gaps that limit the hospital facility's ability to assess the community's health needs

See footnote 10 on page 8, footnotes 13 and 14 on page 9, and footnote 25 on page 18

j. Other (describe in Section C)

N/A

4. Indicate the tax year the hospital facility last conducted a CHNA: 2015

5. In conducting its most recent CHNA, did the hospital facility take into account input from persons who represent the broad interests of the community served by the hospital facility, including those with special knowledge of or expertise in public health? If “Yes,” describe in Section C how the hospital facility took into account input from persons who represent the community, and identify the persons the hospital facility consulted

Yes, see footnote 15 on page 9 and footnote 37 on page 61

6. a. Was the hospital facility's CHNA conducted with one or more other hospital facilities? If "Yes," list the other hospital facilities in Section C

No

b. Was the hospital facility's CHNA conducted with one or more organizations other than hospital facilities? If “Yes,” list the other organizations in Section C

See footnote 4 on page 4 and footnote 7 on page 7

7. Did the hospital facility make its CHNA report widely available to the public?

Yes

If “Yes,” indicate how the CHNA report was made widely available (check all that apply):

a. Hospital facility's website (list URL)

https://www.gcrmc.org/

b. Other website (list URL)

No other website

c. Made a paper copy available for public inspection without charge at the hospital facility

Yes

d. Other (describe in Section C)

8. Did the hospital facility adopt an implementation strategy to meet the significant community health needs identified through its most recently conducted CHNA? If “No,” skip to line 11
Yes

9. Indicate the tax year the hospital facility last adopted an implementation strategy: 20__

2015

10. Is the hospital facility's most recently adopted implementation strategy posted on a website?
   a. If “Yes,” (list url):
   b. If “No,” is the hospital facility's most recently adopted implementation strategy attached to this
      return?

11. Describe in Section C how the hospital facility is addressing the significant needs identified in its most recently
    conducted CHNA and any such needs that are not being addressed together with the reasons why such needs
    are not being addressed

    See footnote 32 on page 33

12. a. Did the organization incur an excise tax under section 4959 for the hospital facility's failure to conduct a
    CHNA as required by section 501(r) (3)?

    None incurred

    b. If “Yes” to line 12a, did the organization file Form 4720 to report the section 4959 excise tax?

    Nothing to report

    c. If “Yes” to line 12b, what is the total amount of section 4959 excise tax the organization reported on
       Form4720 for all of its hospital facilities?

    Nothing to report
